U.S. Application of FINK et al., Appln. No. 10/705,224 atty. dkt. 071469-0305806

IN THE CLAIMS:

01:53pm

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 1. (Currently Amended) A baffle plate assembly for surrounding a substrate holder in a plasma processing system comprising:
- a centering ring configured to be coupled to said substrate holder, wherein at least a portion of said centering ring extends radially outside a periphery of said substrate holder; and

a <u>removable</u> baffle plate comprising one or more passageways, wherein said baffle plate is configured to be centered within said plasma processing system by <u>removably</u> coupling said baffle plate to said portion of said centering ring extending radially outside said periphery of said substrate holder.

- 2. (Original) The baffle plate assembly of claim 1, wherein said centering ring is coupled to said substrate holder using fasteners.
- 3. (Original) The baffle plate assembly of claim 1, wherein said centering ring comprises a centering feature configured to center said baffle plate on said centering ring.
- 4. (Original) The baffle plate assembly of claim 3, wherein said centering feature comprises at least one of a centering pin, a centering receptacle, a centering edge, and radial face gear teeth.
- 5. (Original) The baffle plate assembly of claim 3, wherein said baffle plate comprises a mating feature configured to be coupled with said centering feature.
- 6. (Original) The baffle plate assembly of claim 5, wherein said mating feature comprises at least one of a centering pin, a centering receptable, a centering edge, and radial face gear teeth.

U.S. Application of FINK et al., Appln. No. 10/705,224 atty. dkt. 071469-0305806

From-PILLSBURY WINTHROP

- The baffle plate assembly of claim 1, wherein said (Original) centering ring is made from aluminum.
- The baffle plate assembly of claim 1, wherein said 8. (Original) baffle plate is made from at least one of aluminum, alumina, silicon, silicon carbide, silicon nitride, quartz, carbon, and ceramic.
- The baffle plate assembly of claim 1, wherein a surface 9. (Original) of said baffle plate comprises a protective barrier.
- The baffle plate assembly of claim 1, wherein a portion 10. (Original) of a surface of said baffle plate comprises a protective barrier.
- The baffle plate assembly of claim 9 or 10, wherein said Original) protective barrier comprises at least one of surface anodization, a coating formed using plasma electrolytic oxidation, and a spray coating.
- The baffle plate assembly of claim 9 or 10, wherein said 12. (Original) protective barrier comprises a layer of at least one of a III-column element and a Lanthanon element.
- The baffle plate assembly of claim 9 or 10, wherein said 13. (Original) protective barrier comprises at least one of Al₂O₃, Yttxia (Y₂O₃), Sc₂O₃, Sc₂F₃, YF₃, La_2O_3 , CeO_2 , Eu_2O_3 , and DyO_3 .
- The baffle plate assembly of claim 1, wherein said one 14. (Original) or more passageways comprises at least one of a slot, and an orifice.
- The baffle plate assembly of claim 1, wherein at least 15. (Original) one of the size, shape, and distribution of said one or more passageways varies on said baffle plate.

U.S. Application of FINK et al., Appln. No. 10/705,224 atty. ckt. 071469-0305806

16. (Currently Amended) A disposable baffle plate for surrounding a substrate holder in a plasma processing system comprising:

a <u>removable</u> ring comprising a first edge configured to be coupled <u>removably</u> to said substrate holder via a centering ring with at least a portion of said centering ring extending radially outside a periphery of said substrate holder, a second edge configured to be proximate a wall of said plasma processing system, and one or more openings to permit the passage of gas therethrough,

wherein said coupling of said first edge to said centering ring facilitates centering said ring in said plasma processing system such that a space between said second edge and said wall is substantially constant.

17. (Previously Presented) A method of replacing a baffle plate disposed adjacent a centering ring with at least a portion of said centering ring extending radially outside a periphery of a substrate holder, said baffle plate surrounding said substrate holder in a plasma processing system, the method comprising:

removing said first baffle plate from said centering ring in said plasma processing system; and

installing a second baffle plate in said plasma processing system by coupling said second baffle plate to said centering ring, wherein said coupling facilitates autocentering of said second baffle plate in said plasma processing system.
